ID-MobileWorks™

In the field Electronic Fingerprint Identification

ID-MobileWorks™, Mobizent's mobile idnetification application, provides Law Enforcement Departments the ability to conduct ID Checks efficiently and effectively.

ID-MobileWorks™, Mobizent's mobile identity checking application is used by law enforcement to automatically check the identity of individuals in the field. This software operates on our partners handheld devices, mobile data terminals and tablet devices wirelessly connected to fingerprint devices such as Cogents Bluecheck device or connected directly via a clip-on to the Handheld device.

ID-MobileWorks, can be added as a module to Mobizent's TicketWorks solution or used in a stand-alone mode, integrated with a Field Investigation application, to verify and confirm the identity in the field. This front-end solution connects to a Mobizent back-end solution that monitors and keeps track of all the mobile devices in the field and connects to the local AFIS, with a connection to NCIC in the next phase. This solution has already had 10 arrests of individuals with Warrants in the field.

The fingerprint capture devices used in conjunction with the Handheld device captures the fingerprint in approved NIST compliant formats and stores these fingerprints and ensures only quality prints are taken by the officer. The fingerprints are then transferred to the Handheld and wirelessly transmitted to the Mobizent Back-end for processing with AFIS.

ID-MobileWorks™, Mobizent's mobile identity checking application, is used to automatically check the identity of individuals in the field. This software operates on handheld devices, mobile data terminals and tablets connected via Bluetooth® to Cogent Systems' BlueCheck™ Device, or connected devices such as Motorola's Fingerprint.

ID-MobileWorks™ can be added to Mobizent TicketWorks™ Law Enforcement ticketing solution or used in a stand-alone mode, integrated with a Field Investigation application, to verify and confirm identity in the field. The front-end solutions connect to a Mobizent back-end solution that monitors and keeps track of the mobile devices in the field, conducts local checks, and/or connects directly to the local AFIS system and if

Statewide then switches to NCIC. ID-MobileWorksTM is available in several configurations. Cogents Bluecheck and Motorola MC75 with Biometric attachment.

ID-MobileWorksTM also works on the Motorola's legacy of innovation in wireless technology and leadership in biometrics converge in this latest Mobile AFIS on the MC70/75 EDA with biometric attachment, which delivers all the features and functionality required to accurately identify individuals and maximize productivity in a hand held rugged computer.

The Motorola Mobile AFIS re-defines the standard for mobile biometric identification with simultaneous FIPS 201 certified fingerprint sensor, ISO compliant contact card reader/writer and contactless contact card reader/writer as well as phone with push-to-talk capabilities, integrated 1D/2D barcode scanners, integrated GPS, and up to 256 MB RAM to support multiple applications on one device.

Benefits of IDMobileWorks:

- Simplifies Identity Checking
- Improves Safety of Officers in the Field Personnel
- Reduces the need to being people in to be identified
- Ensures Data Integrity
- Enhances Data Analysis
- Increases Officer Productivity
- Integrates with Department Networks and Databases

Features of IDMobileWorks:

- Electronic data capture
- Pre-defined lists and options
- Available on handheld devices and MDTs
- Advanced security features (Biometrics)
- Wireless synchronization mode
- Customizable to Department requirements
