# TicketWorks™

Electronic Ticketing for Law Enforcement

TicketWorks™, Mobizent's mobile ticketing application, provides Law Enforcement Departments the ability to issue citations efficiently, effectively while eliminating errors and entry duplication.

Ticketworks™, is a comprehensive Law Enforcement Ticketing solution for Citation issuance and Field investigation. TicketWorks™ not only allows Traffic Citation issuance but also Criminal Citations. Designed to run on Android devices, Windows laptops, and Windows based Mobile devices, TicketWorks™ provides highly sophisticated modules that intelligently work together to allow officers to complete error free citations in the least amount of time. In addition to the front-end, TicketWorks™ also has comprehensive back-office system that easily and seamlessly integrates into agency databases, CAD Systems, Court Systems and DMV systems.

TicketWorks™ improves data collection, prints an accurate citation, and eliminates the need to re-enter data into additional systems.

TicketWorks™ is a cost-effective solution that reduces the amount of time spent by allowing officers to scan/swipe Drivers Licenses to capture all the subject information, scan registrations to capture all Vehicle Information, and select relevent information from a pre-populated list of violations. Using TicketWorks™ provides the latest technological features like capturing GPS coordinates for location address, photo capture, incident sketching, voice recording, fingerprinting and mugshot retrieval. Mobizent's famed "Make-Similar" logic allows officers using TicketWorks™ to complete and issue a citation within 90 seconds.

TicketWorks™ ensures that the entire process is streamlined from the initial entry of the information through the reporting and data collection analysis, to ensure that Law Enforcement Agencies save time and money. TicketWorks™ "Investigative Search" feature provides data analysis and data visualization capabilities to investigative officers during crime investigation.

TicketWorks™ also provides a complete electronic ticket record that not only provides the standard required fields, but also provides a back-office solution to allow officers to manage the ticket data. Our back-office solution provides interfaces to the local CAD/RMS, the courts as well as mapping of ticketing data, searching of the ticket database and many other critical functions.

Features of TicketWorks™:

- ») Electronic scan/swipe of license and registration
- ») Pre-defined lists and options
- ») Printing to portable printer
- ») Advanced security features (biometric, signature validation)
- ») Wireless or Direct Synchronization
- ») Works on Android, Windows Mobile and Laptops
- ») Customizable to Department requirements
